Mariz P. Catindig - Francisco

People Management and Development Head

Sunnies Studios

Dear **Mrs. Catindig - Francisco**,

We, the third-year students of the College of Information Technology, are conducting a capstone and research entitled **“AI HR: An Artificial Intelligence-Based Human Resource Management System for Enterprise Companies.”**

This study aims to develop an AI-powered web-based system designed to intelligently handle the full HR lifecycle within enterprise companies. The proposed system will: (1) screen and evaluate job applicants and determine their acceptance or rejection based on company-defined criteria; (2) oversee and monitor employee performance and work output; (3) facilitate communications to upper management regarding employee promotions or terminations; and (4) process employee resignations and automatically notify upper management of resignation submissions.

A core principle of AI HR is its expert-informed design — all system logic, evaluation criteria, and workflow automation will be grounded in the knowledge and experience of HR professionals like yourself. To achieve this, we seek to understand your current HR processes, the challenges your department faces, and the features that would make an AI-based HR system most effective and appropriate for enterprise use.

We respectfully request your participation in a structured interview to gather your professional knowledge and insights. Rest assured that all information gathered will be treated with strict confidentiality and will be used solely for academic purposes to make our study possible.

We sincerely hope for your favorable response. Your insights will greatly contribute to the development of a responsible, efficient, and professionally grounded HR management system for enterprise companies.

Respectfully,

BADIC, KIM ANGELO

DISCLOSURE AND CONSENT AGREEMENT

Dear [Title] [Surname],

We are third-year students of the College of Information Technology at Dr. Yanga's Colleges, Inc., conducting a capstone and research study entitled **"AI HR: An Artificial Intelligence-Based Human Resource Management System for Enterprise Companies."** The purpose of this study is to develop an expert-informed, AI-powered system that manages the full HR lifecycle — from hiring and employee monitoring to promotion, termination, and resignation processing — within enterprise companies.

Your participation in this interview will involve sharing your professional knowledge on current HR processes, challenges faced in HR management, and the features and requirements of an effective AI-based HR system. The information you provide will serve as the professional foundation of our system design and will be used solely for academic purposes.

Confidentiality

All responses will be treated with strict confidentiality. No personal names or identifying details will be included in the final report without your explicit consent. Data will be presented only in summary form.

Voluntary Participation

Your participation is completely voluntary. You may refuse to answer any question or withdraw from the interview at any time without penalty.

Consent Statement

By signing below, you acknowledge that:

- You have read and understood the disclosure statement.
- You voluntarily agree to participate in this study.
- You understand that your responses will be kept confidential and used only for academic purposes.

We sincerely hope for your cooperation and support. Thank you very much for your time and expertise.

Acknowledgment by Respondent:

I, the undersigned, have read and understood the disclosure above. I voluntarily agree to participate in this study.

Name of Respondent: Mariz Camdig-Francisco

Signature: _____

INTERVIEW QUESTIONNAIRE

I. Current Process

1. What type of HR process does your company currently use?

- a. Manual b. Digital / System-based c. None

1.1 Manual

- How is the manual HR process currently carried out (hiring, performance monitoring, resignations)? *Applicant Tracking System is manually encoded on Excel. Interview Notes are recorded manually as well. Performance Management and Resignations are integrated in our HRIS*
- What tools or methods are used (e.g., paper forms, logbooks, spreadsheets, physical records)? *Excel and HRIS*
- What are the most common limitations or challenges of the current manual process?
For Applicant Tracking System, it makes it difficult for the team to extract data since they would have to pull from three (3) different applicant tracking systems. On interview notes, hiring managers would have to take down their insights manually.

1.2 Digital / System-based

- What digital tools or platforms are currently used to manage HR functions? *Internally developed HRIS*
- How does the current system support hiring, employee monitoring, and HR-to-management communications? *Centralized requisition and approval process - making it easier to keep track of all personnel movements.*
- What limitations or challenges are experienced with the current digital system?
A lot of the processes are not yet interconnected so there's still manual interventions required - like following up approval. Building conditions on the account of other dependent processes could help automate this.

1.3 None

- How does your company manage HR functions (hiring, monitoring, resignations) without a formal system?
- What difficulties does your company face without a structured HR process in place?

2. Who are the people involved in the hiring process, and what are their specific roles?

- Who receives and initially reviews job applications?
- Who is responsible for screening, evaluating, and making the final hiring decision?
- Is there coordination with department heads or upper management during the hiring process?

3. How does your company currently determine whether an applicant is fit or unfit to be hired?

- What criteria or standards are used to evaluate applicants (e.g., skills, experience, interview scores)? *It varies depending on the type of role we're hiring for but as a baseline, it's important for us to hire someone aligned with our core values.*
- Who makes the final decision on whether an applicant is accepted or rejected? *This varies as well, depending on the level of the role we're hiring for. Entry-level roles for our stores is decided by my team while HQ roles are decided by division heads.*
- How is the applicant notified of the decision?
My Talent Acquisition team sends them an email.

DR. YANGA'S COLLEGES, INC.

182 MACARTHUR HIGHWAY, WAKAS, BOCAUE, BULACAN PH 3018

4. What is the step-by-step process once a job application is received by your HR department?

- How is the application initially reviewed and assessed? *CVs are screened based on relevant experience relative to the role they're applying for.*
- What evaluation or screening steps are conducted before a final decision is made? *Initial screening then up to 3 levels of interviews before a decision is made*
- How long does the entire hiring process typically take from application submission to final decision? *Approximately 2-3 weeks.*

5. How does your company currently monitor and oversee employee performance and work output?

- What methods or tools are used to track employee productivity and performance? *Attendance and Performance is recorded through our HRIS*
- How often are formal performance evaluations conducted? *Once a year*
- How are performance issues or concerns escalated to upper management? *Upon completion of performance review data, this is presented to the management for the necessary action to be made - PIP / IDP / Coaching*

6. How are promotion and termination decisions currently processed and communicated to upper management?

- Who initiates a promotion or termination recommendation, and how is it documented?
- How is the recommendation formally submitted and reviewed by upper management?
- What is the typical timeline from recommendation to final decision?
Promotion recommendations are submitted after every performance review cycle through email. Timeline for decision may take up to 2 weeks.

Promotions are initiated by an employee's Immediate Head while Terminations are decided on by my Labor Relations team as this has to be assessed against Art. 297-299 of the Labor Code of the Philippines.

7. How are employee resignations currently handled in your company?

- What is the process from the moment an employee submits a resignation letter?
- Who is responsible for processing the resignation and notifying upper management?
- How is the final clearance and exit process managed?

Resignations are submitted through our HRIS which then would notify the Immediate Head to review and accept the resignation consistent with our notice period requirement. Processing of resignation is collaboratively done by the Immediate Head and the HR-Offboarding team. Final Clearance and exit process are done manually on excel.

8. How are employee records currently stored and managed?

- Where are HR records kept (e.g., physical files, digital folders, HR software)?
- Who has access to employee records, and how is confidentiality maintained?
- How long are records retained after an employee resigns or is terminated?

HR Records are kept online, in our HRIS. Access to employee records are usually limited to me, my Talent Acquisition team and Total Rewards team. Records are retained up to 3 years, as required by law.

II. Challenges and Issues

Direction: Rate the following statements based on your experience:

1 – Strongly Disagree | 2 – Disagree | 3 – Neutral | 4 – Agree | 5 – Strongly Agree

No.	Statement	5	4	3	2	1
9	The current process of screening and hiring applicants is slow, inefficient, and prone to human error.			✓		
10	Manual evaluation of applicants often leads to inconsistent or biased hiring decisions.			✓		
11	Tracking employee performance and productivity manually is difficult and unreliable.					✓

No.	Statement	5	4	3	2	1
12	There is often a delay in communicating promotion or termination decisions to upper management.	✓				
13	The current process of handling employee resignations involves too many manual steps and lacks proper documentation.	✓				
14	HR staff struggle to notify upper management accurately and promptly about important employee status changes.	✓				
15	There is a lack of a unified system to manage the complete HR lifecycle from hiring to resignation.		✓			
16	Current HR tools cannot automatically evaluate or rank applicants based on set qualifications or criteria.		✓			
17	Employees and applicants often experience delays or lack of feedback due to limitations in current HR processes.		✓			
18	The overall HR process in this company needs significant improvement in speed, accuracy, and automation.			✓		

III. System Needs

19. An AI-based system that automatically screens and evaluates applicants would significantly improve the accuracy and speed of the hiring process. *Yes, and this is already available on LinkedIn, primarily for HQ roles.*
20. An AI system that determines whether an applicant is accepted or rejected based on set company criteria would reduce human bias in hiring. *I find that this may be helpful but there are still behavioral signals that only humans are able to catch during interviews.*
21. An AI system that monitors and oversees employee work and performance in real time would improve overall workforce productivity. *Attendance may be helpful yes - but improving workforce productivity takes more than just an AI tool to do. There are factors such as culture, employee engagement, motivation and morale to account for.*
22. An AI system that automatically notifies upper management when an employee is recommended for promotion would improve the speed and accuracy of promotion decisions. *An automated notification is already available for us.*
23. An AI system that processes termination procedures and automatically informs upper management would ensure proper documentation and timely communication. *An automated notification is already available for us.*
24. An AI system that receives, processes, and automatically notifies upper management of employee resignation submissions would improve HR workflow efficiency. *Yes, helpful but doesn't have to be all AI.*
25. A centralized AI-integrated HR platform that manages the full employee lifecycle — from hiring to resignation — is needed in enterprise companies. *Yes.*
26. Clear guidelines and human oversight must be maintained to ensure the AI HR system does not make final decisions without proper review from authorized HR personnel or management. *Yes, agree.*

INTERVIEW QUESTIONNAIRE

AI HR System Design – Functional Requirements and Professional Recommendations

I. Current Process

1. In your professional experience, what are the most critical factors that determine whether an applicant is suitable for a position in an enterprise company?

- Which qualifications or attributes do HR professionals typically prioritize (e.g., skills, education, experience, attitude)? At Sunnies, the first thing we evaluate is culture fit - does the candidate display behavior that is consistent with our core values? The next thing we look at is technical fit - does the candidate have the technical competencies required for the role?
- Are there factors that are commonly overemphasized but are actually less reliable in predicting job performance? Educational background is overemphasized sometimes, and work history with big players in the industry - but these aren't reliable on its own in predicting job performance.

2. What does an effective employee performance monitoring process look like in your experience?

- What key performance indicators (KPIs) or metrics are most commonly used to evaluate employees? There is no 1 size, fits all KPIs. KPIs are established differently per division, team and role. But KPIs should be SMART for all - Specific, Measurable, Attainable, Realistic, Time-bound.
- How frequently should performance be formally reviewed in an enterprise setting? Once or twice a year is standard with informal quarterly conversations.
- What warning signs typically indicate that an employee may need intervention before a termination decision is made? Unable to meet their KPIs, attendance and/or behavioral issues.

3. How should a promotion decision be determined, documented, and communicated in an enterprise company?

- What performance criteria or milestones typically justify a promotion recommendation?
- Who should be involved in the promotion decision-making process?
- What information should be included in a promotion report submitted to upper management?

Promotions should be decided based on: 1. Has the employee been consistently meeting her KPIs? 2. Does she have the proficiency level for required for the technical competency of the role she's moving towards to? In other companies, tenure may also be considered. Promotion decision-making process should involve the Immediate Head, HR and Management. Information to be included would be: Current and New Role, a copy of the last 3 performance records.

4. How should a termination decision be processed and communicated to upper management?

- What process should be followed before a termination decision is finalized? Depends on the type of separation. If this is voluntary resignation, then Immediate Head has to formally accept the resignation filed.
- What documentation or evidence should accompany a termination recommendation?
- What are the most common reasons for employee termination in enterprise companies? Acceptance Notice for voluntary resignations, Notice of Decision for termination due to just causes, Notice of Redundancy, Retrenchment or Closure for termination due to authorized causes.

Voluntary Resignation, Termination due to Just Causes (Serious Misconduct, Fraud and Willful Breach of Trust, Gross and Habitual Neglect)

5. What does an ideal employee resignation process look like from an HR perspective?

- What steps should HR follow from the moment a resignation is submitted to the final exit clearance? Resignation should automatically notify the Immediate Head for acceptance which would then trigger a digital clearance for sign off of relevant departments upon return of employee accountabilities - once clearance is completed, this should automatically trigger Payroll to compute the final pay and automatically send a copy to the employee for validation prior to release.
- What information should be captured and recorded when an employee resigns? Effective date of resignation, type of separation (regrettable / non-regrettable), reason for leaving (categorized as work dimensions for us)
- What should the notification to upper management include when an employee resigns? Name of the employee, position, department and effective date of resignation

6. What do you consider the most important data points that an AI-based HR system should capture and store throughout the employee lifecycle?

- What hiring-related data is most critical to retain for future reference? Fill rate, time to fill, quality of hires (conversion to regular employees), offer acceptance rate, sourcing channel effectiveness
- What ongoing employee data should be tracked to support performance evaluations and HR decisions? Competency gaps, interventions implemented, performance history

DR. YANGA'S COLLEGES, INC.

182 MACARTHUR HIGHWAY, WAKAS, BOCAUE, BULACAN PH 3018

- What information should be stored and accessible when an employee exits the company?

7. What specific HR functions do you believe should remain under full human control, even in an AI-powered HR system?

- Are there decisions that should never be made autonomously by an AI system? Hiring.
- What level of human review or approval should be required before an AI-generated HR action takes effect? Consistent oversight should still be practiced.

II. Challenges and Issues

Direction: Rate the following statements based on your professional experience and observation:

1 – Strongly Disagree | 2 – Disagree | 3 – Neutral | 4 – Agree | 5 – Strongly Agree

No.	Statement	5	4	3	2	1
8	Applicants are often evaluated inconsistently because HR staff rely on subjective judgment rather than standardized criteria.		✓			
9	Many HR departments lack a structured, data-driven method for assessing whether an applicant truly fits the company's needs.		✓			
10	Performance evaluations are often delayed or skipped due to the manual effort required to conduct and document them.	✓				
11	Upper management often lacks timely and accurate information when making decisions about promotions or terminations.	✓				
12	The absence of automated notifications means that important HR events (resignations, promotions) are frequently not communicated on time.				✓	
13	HR staff spend too much time on administrative tasks that could be automated, reducing their capacity to focus on strategic HR functions.				✓	
14	There is currently no standardized process in most companies for capturing and storing all HR-related data in one accessible system.			✓		
15	Employees and applicants experience poor communication or feedback during the HR process due to the inefficiency of manual systems.			✓		

III. System Needs

16. An AI system that evaluates applicants against a predefined set of company-specific criteria would produce more consistent and objective hiring decisions. Possible, yes.

DR. YANGA'S COLLEGES, INC.

182 MACARTHUR HIGHWAY, WAKAS, BOCAUE, BULACAN PH 3018

17. An AI-powered performance monitoring module that tracks employee KPIs in real time and generates alerts for performance concerns would improve workforce management. This could work - but involves a lot of tedious data gathering work. KPIs are usually extracted from manual trackers, more often than not.
18. Automated, AI-generated reports submitted to upper management for promotions, terminations, and resignations would improve the speed and accuracy of HR communications. Yes, agree.
19. A centralized digital HR record system that stores all applicant and employee data throughout their lifecycle would improve data accessibility and decision-making. Agree - and this is already available in our organization.
20. AI-generated hiring decisions should always be reviewed and approved by a human HR officer before being communicated to the applicant. Agree.
21. Clear audit trails and documentation must be maintained by the AI HR system for all decisions made throughout the employee lifecycle. Agree.
22. Strict data privacy and access controls must be built into the AI HR system to protect the confidentiality of employee and applicant information. Agree.
23. A well-designed AI HR system that automates routine HR tasks would allow HR professionals to focus on more strategic and human-centered responsibilities. Agree.
